

Design flexibility Cost savings and convenience

Jack Bays, Inc. and Butler can provide the expertise and engineering to assist in design development from preliminary stages to final construction documents. The ease of single sourcing the design development from inception to completion and the cost savings of Butler Systems are unique benefits Jack Bays, Inc. can offer you.

A critical process of any construction project is managing the schedule. Jack Bays, Inc. has the capacity to streamline a Butler Building System for your project. We will assume single source responsibility for planning, engineering, fabrication, coordination with other building elements and erection of the facility. Cost efficiency of the structure, roof and walls and Butler's ability to expedite design, fabrication and erection enables you to save precious time and money.

Building Systems

Widespan Structural System

Butler's most basic building system, also the most versatile. Framing options include LRF, MRF and WX systems.

Landmark 2000 Structural System

Clear or multi-span rigid frames with tapered or straight columns and roof beams; with a gable or single slope roof.

Butler Hardwall Structural System

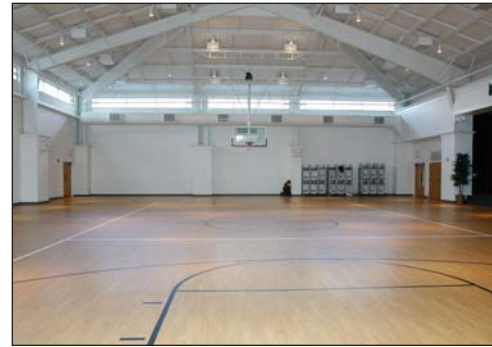

A structural system that combines the advantage of concrete wall construction with the world's finest metal roof system.

Butlerib II Roof System

Butler's basic roof for the Widespan structural system. An economical roof system with an industry exclusive 10 year weathertightness warranty.

MR-24 Roof System

The most specified standing seam roof system on the market. The roof system is available with a 25-year warranty, not just against perforation, but for weathertightness.
